MontyCloud

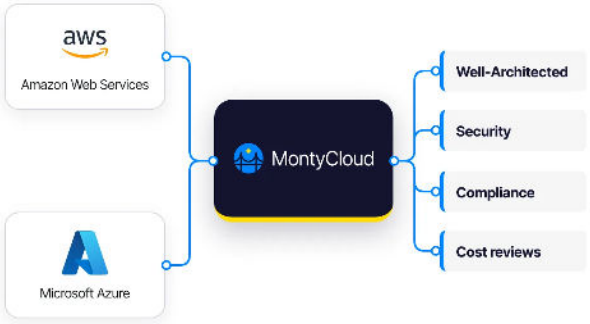

MULTICLOUD

Two clouds. One way to run them.

Your business runs on more than one cloud. Your operations shouldn't need more than one platform. MontyCloud gives IT teams and MSPs one view of AWS and Microsoft Azure, and runs Well-Architected, security, and compliance checks the same way on both.

One view of AWS and Microsoft Azure

Managing AWS and Microsoft Azure side by side usually means separate tools, processes, and specialists for each. MontyCloud standardizes the operational core of CloudOps across both in one multi-tenant platform, with tenant-scoped actions and least-privilege access.

WHY RUN MULTICLOUD ON MONTYCLOUD

FOR IT TEAMS

See both clouds in one place
Spend, inventory, and findings across both clouds.

One standard for security and compliance
The same daily checks on both clouds.

Cut tool sprawl
One platform instead of per-cloud point tools.

Find savings on both clouds
Cost visibility and savings recommendations.

FOR MSPS

See every customer in one place
Spend, inventory, and findings per customer.

Find revenue opportunities
Assessment findings turn into follow-on work.

Sell recurring services
Package security, compliance, and cost reviews.

Grow your margin
Custom billing and margin reporting on AWS.

WHEREVER YOU'RE STARTING

Already running AWS and Microsoft Azure?
Bring both clouds into one platform. Your team gets one view, one findings workflow, and one way to run security, compliance, and Well-Architected checks.

Adding Microsoft Azure to an AWS footprint?
Start fast. Connect your first Azure subscription with least-privilege access and get full inventory in about 30 minutes, right next to your AWS environments.

Run AWS and Microsoft Azure the same way.
